

Actionable Intelligence for Mobile Devices

A real-time search tool to help attribute devices, investigate crimes and identify leads, with chronological device history and activity from other LEAs.

nmpr.com/us

The NMPR provides a simple interface to search devices by IMEI, serial numbers and other unique security marks and intrinsic identifiers.

Searching allows you to identify device movements and trade, and to build up a comprehensive intelligence picture from the device event history.

Processing over 7 million IMEI checks a month, the NMPR gives one-stop, single-search access to over a billion records of device history data. Information is sourced from other law enforcement agencies, mobile networks, retailers, traders, manufacturers, insurers and the public.

All data is fully consented to, with no warrant needed.

Crime Prevention Ecosystem

The NMPR makes use of a dataset that has been over 20 years in the making. Over the last two decades, Recipero has been building global relationships with law enforcement, partners, clients and the public, harnessing data to develop a crime prevention ecosystem which benefits everyone.

Powered by

NMPR benefits include:

FREE to US law enforcement

NLETS mobile device query available

All data is fully consented to, with no warrant needed
